# COMBI LINE GLUE TRAPS

Combi Roach Trap have been expressly designed for Pest Management Operators. They can be inserted in Ristorat Combi stations and in Combi Case protections. They contain an attractive gel which enhance the roaches attraction.

The Glue traps are essential tools to monitor roaches populations, to determine an infestation origin and/ or to evaluate the treatment results. Combi Roach Traps have been studied to catch the three main roaches species (*Blattella germanica*, *Blatta orientalis* and *Periplaneta americana*) but they can catch even other roaches species.

Combi Case holds and protects Combi Roach Traps. They have accessing holes for insects that perfectly combine with the Combi Rach traps ones, assuring dust protection and long lasting efficacy. Thank to Combi Case, it is possible to realize fixed monitoring stations: the holes on the base can be drilled or glued to the floor. If you want to put the station along the wall, its particular design forces the insects to enter in the glue traps avoiding them to go ahead skimming the wall. The Combi Case opening and the traps substitution are extremely quick and easy, granting a time saving to the Pest Management Operators.

## TRAPS POSITIONING

You must peel off the glue protection with a quick and continuous movement and then fold the cardboard as shown on the pictograms on the trap. It is recommended to fix the tabs in their slits to avoid the trap opening.

Insert the Combi Roach Traps in the Combi Case

The square hole will help for inspections, so it must be faceup.

Put the traps in the monitoring area considering that roaches prefer humid and warm places or cracks with food debris.

Traps must be checked regularly, preferably each week.

The traps lasting vary depending on the place moisture or dust.
