

GERMO INODORE

CONCENTRATED LIQUID GERMICIDE

Concentrated liquid germicide in water solution for the control of fungi, bacteria and viruses

COMPOSITION

100 grams of product contain:

Benzalkonium chloride	g 10
Orthophenylphenol	g 1
Alkylisoquinoline Bromide	g 0,1

Cleansing excipients and deionized water to taste to g 100

CHARACTERISTICS

Thanks to the association of the three synergistic active ingredients, GERMO INODORE guarantees a total and persistent spectrum of action against:

- Gram positive and Gram negative bacteria;
- tuberculous mycobacterium (TB);
- listeria;
- viruses (HIV, HBV, HCV etc.).
- fungi and molds

APPLICATION

GERMO INODORE is used diluted in concentrations of 1% (10 ml per liter of water) for a contact time of 15 minutes. At a 5% dilution (50 ml per liter of water) for a contact time of 5 minutes, the product is active against viruses (including HIV, HBV, HCV) and bacteria, including listeria and mycobacteria.

Apply with sponges, tea towels, sprayers, hand or mechanical pumps or any other means on walls or washable surfaces.

PACKAGING

3 liter can
