

DETEX[®]

WITH LUMITRACK[®]

NON-TOXIC MONITORING BAIT

PRODUCT FEATURES:

- ▶ Biomarker
 - Special additive visible under blacklight
 - Easily detected in rodent feces
- ▶ Non-Toxic
 - Contains no active ingredient
- ▶ Sensitive Accounts
 - Use to monitor rodent activity in schools, food accounts, etc.
- ▶ Tracking/Monitoring
 - Easily track rodent movement and identify harborage areas
- ▶ Prebaiting
 - Helps ensure fast acceptance of rodenticide when used as a prebait
- ▶ Highly Palatable
 - Formulated with food-grade ingredients

PRODUCT
Detex Blox

CODE
993000

CASE QTY
9 lb. pail

USES FOR **DETEX**[®] WITH **LUMITRACK**[®]

HOW TO USE LUMITRACK[®] WITH AN IPM PROGRAM

STEP 1

- ▶ Apply Detex with Lumitrack as a monitoring bait (inside and out) to determine rodent activity and points of entry

STEP 2

- ▶ Once rodent pathways and harborage areas have been identified, place control measures at points of highest activity

STEP 3

- ▶ Once rodent infestation is taken care of, replace control measures with Detex with Lumitrack to monitor for future problems

LUMITRACK[®] APPLICATIONS

RODENT TRAVEL & PATHWAYS

- ▶ Simplified identification of rodent pathways should aid in proper placement of control measures
- ▶ Areas to rodent proof can be better identified because of converging pathways or paths that disappear

INBOUND PALLET INSPECTION

- ▶ Inspecting inbound pallets will become more accurate by enhanced visibility of droppings
- ▶ Detex with Lumitrack can be used upstream in the supply chain to ensure accuracy at receiving ports

SPECIES IDENTIFICATION

- ▶ Droppings in the surrounding ground cover should more easily be found to determine the type of rodent infestation
- ▶ Infestation size will be more easily determined based on dropping counts
